RECORDING DESCRIPTION

Sampling frequency

The sampling frequency is the division frequency used when an analog waveform is converted to digital.

The sampling frequency indicators light up according to the sampling frequency of the current input source.

32kHz: When a BS tuner is recorded or played in A mode; long playback DAT tapes

44kHz: When CDs or DAT music tapes are recorded or played

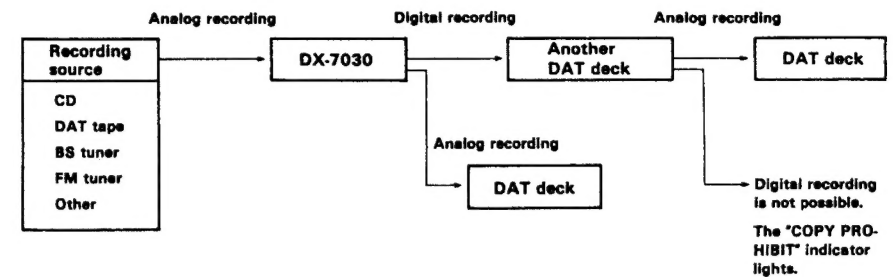

48kHz: When a BS tuner is recorded or played in B mode; when recording from an analog signal

**Copy prohibition code (SCMS: Serial Copy Management System)**

Sources which contain a copy prohibition code can be recorded only once.

When recording from an analog signal

Analog input sources do not contain copy prohibition codes and can be recorded as many times as desired.

**When recording from a digital source**

DISASSEMBLY FOR REPAIR

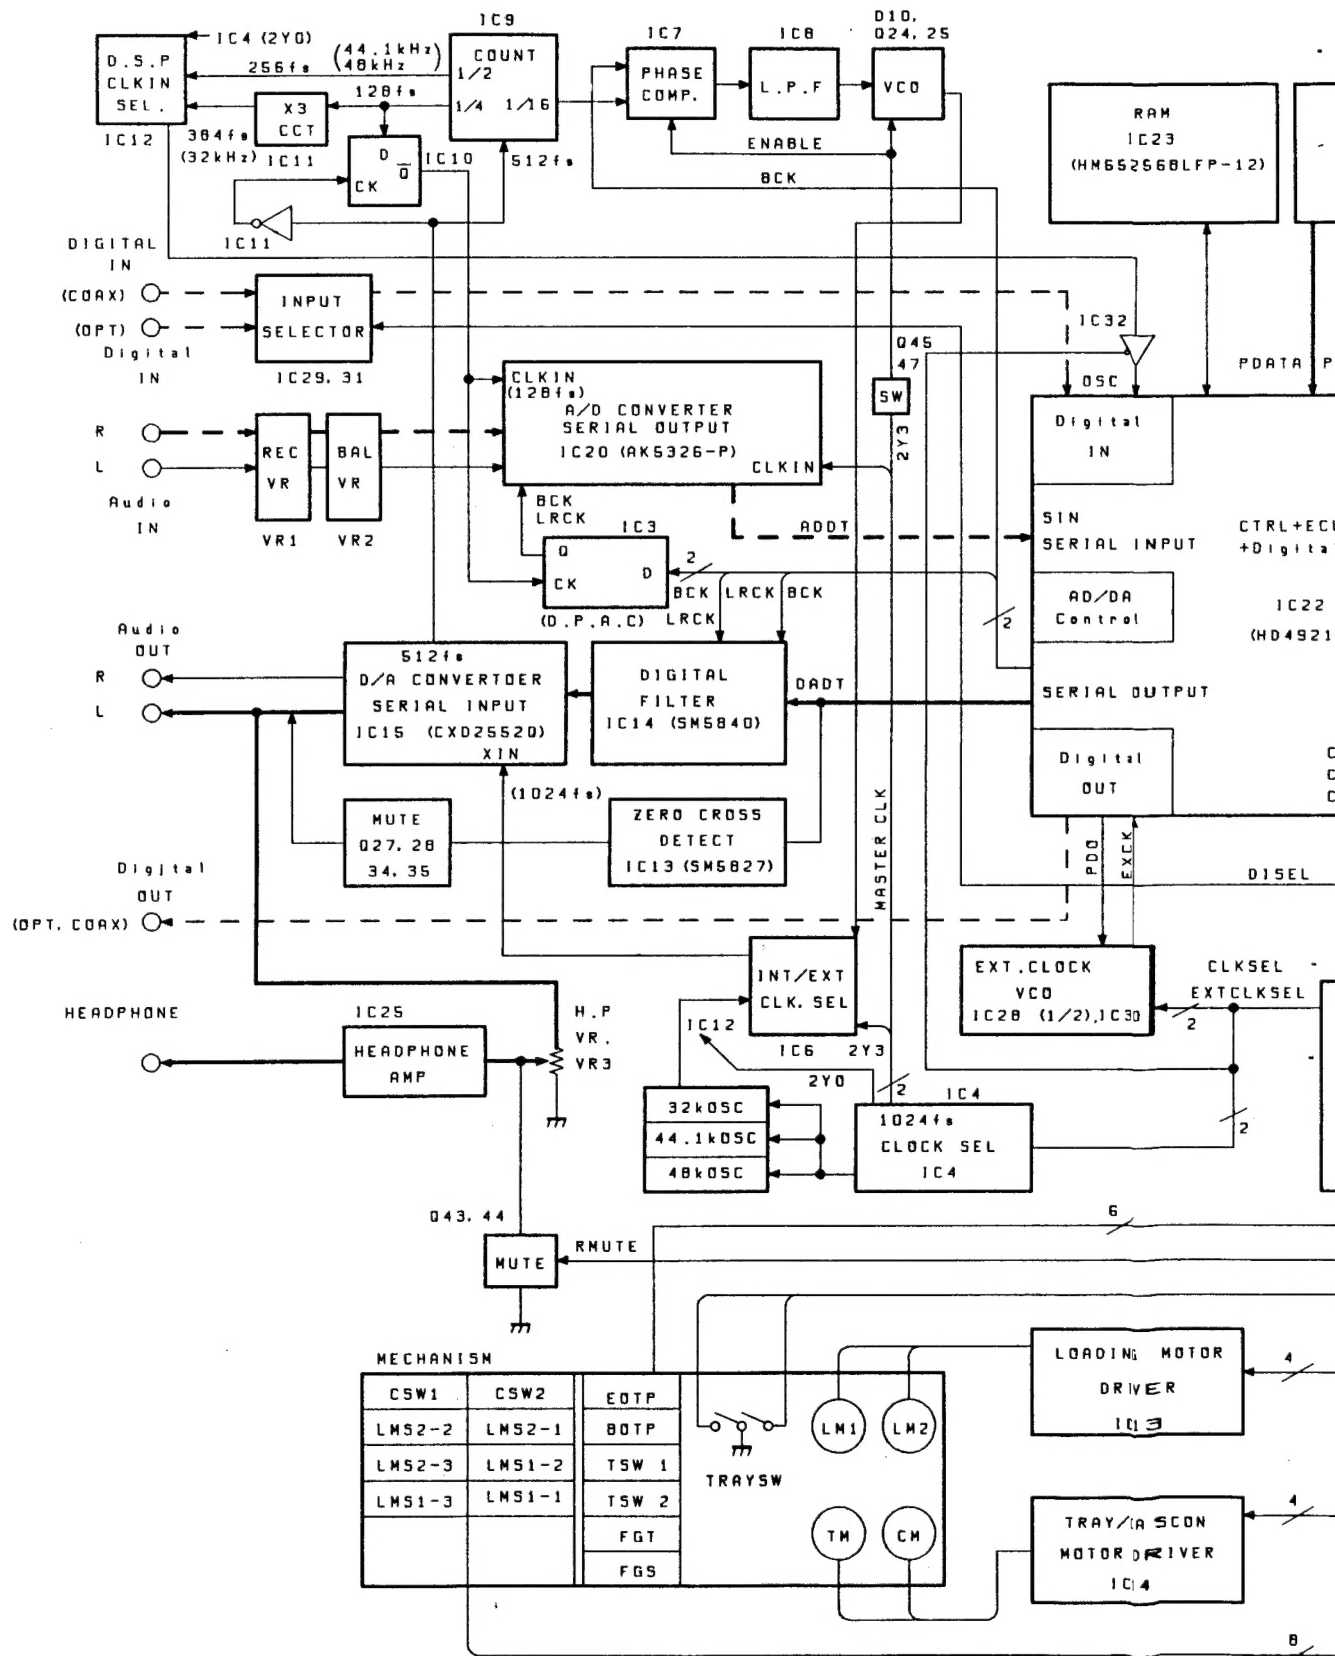

How to Disassemble Mechanism

1. Remove the tray panel (1).
2. Remove 2 screws (2), and shield cover.
3. Remove 4 screws (3).
4. Remove 3 connectors (4), and mechanism.

ADJUSTMENT (MECHANISM)

ADJUSTING THE MECHANISM

Tape Run Post System

The tape run post system consists of nine posts, cylinder, and capstan motor shown in the figure below. The capstan motor runs the tape at a constant speed and the tape runs steadily along the nine posts.

Position of Posts and Tape

Preparing for Adjustment

1. Checking the height of the guide roller

No adjustment is necessary unless the tape edges are wrinkled or folded. No adjustment is necessary unless the RF waveform is correct as shown in the figure.

2. Connection points of the measuring instrument

Connect the oscilloscope as follows:

CH1: CN7 pin 3 (RF)

CH2: CN8 pin 6 (SWH)

Trigger: Use the CH2 SWH. SWH "L" → Ach, "H" → Bch

3. Load the test tape TY7251 for the adjustment.

4. Turn on the test mode switch (S1) on the X29 board.

Adjustment

1. Press the PLAY key and check the RF waveform. Check the parts that require adjustment. (To be adjusted in the entrance or exit?)
2. Press the AUTO/MANUAL key and set to MANUAL. (The ATF servo goes off, then.)
3. According to the adjustment guide, adjust the RF envelope of each waveform the correct waveform.

Envelope waveform

	Tape floated		Tape sunk		Correct waveform
	Entrance	Exit	Entrance	Exit	
Adjustment guide	Turn the entrance guide roller clockwise (lower the guide roller) to flatten the envelope.	Turn the exit guide roller clockwise (lower the guide roller) to flatten the envelope.	Turn the entrance guide roller counterclockwise (raise the guide roller) to float the tape. Rotate the entrance guide roller clockwise to flatten the envelope.	Turn the exit guide roller counterclockwise (raise the guide roller) to float the tape. Rotate the exit guide roller clockwise to flatten the envelope.	

Note: Dot lines indicate the envelope waveform when the tape floats or sinks significantly.

After adjustment, lock the guide rollers with the guide roller clamp screw (in the unloading status). Play the tape again and check for any changes in the envelope waveform.

First, adjust the entrance guide roller to flatten the RF envelope. Next, adjust the exit guide roller.

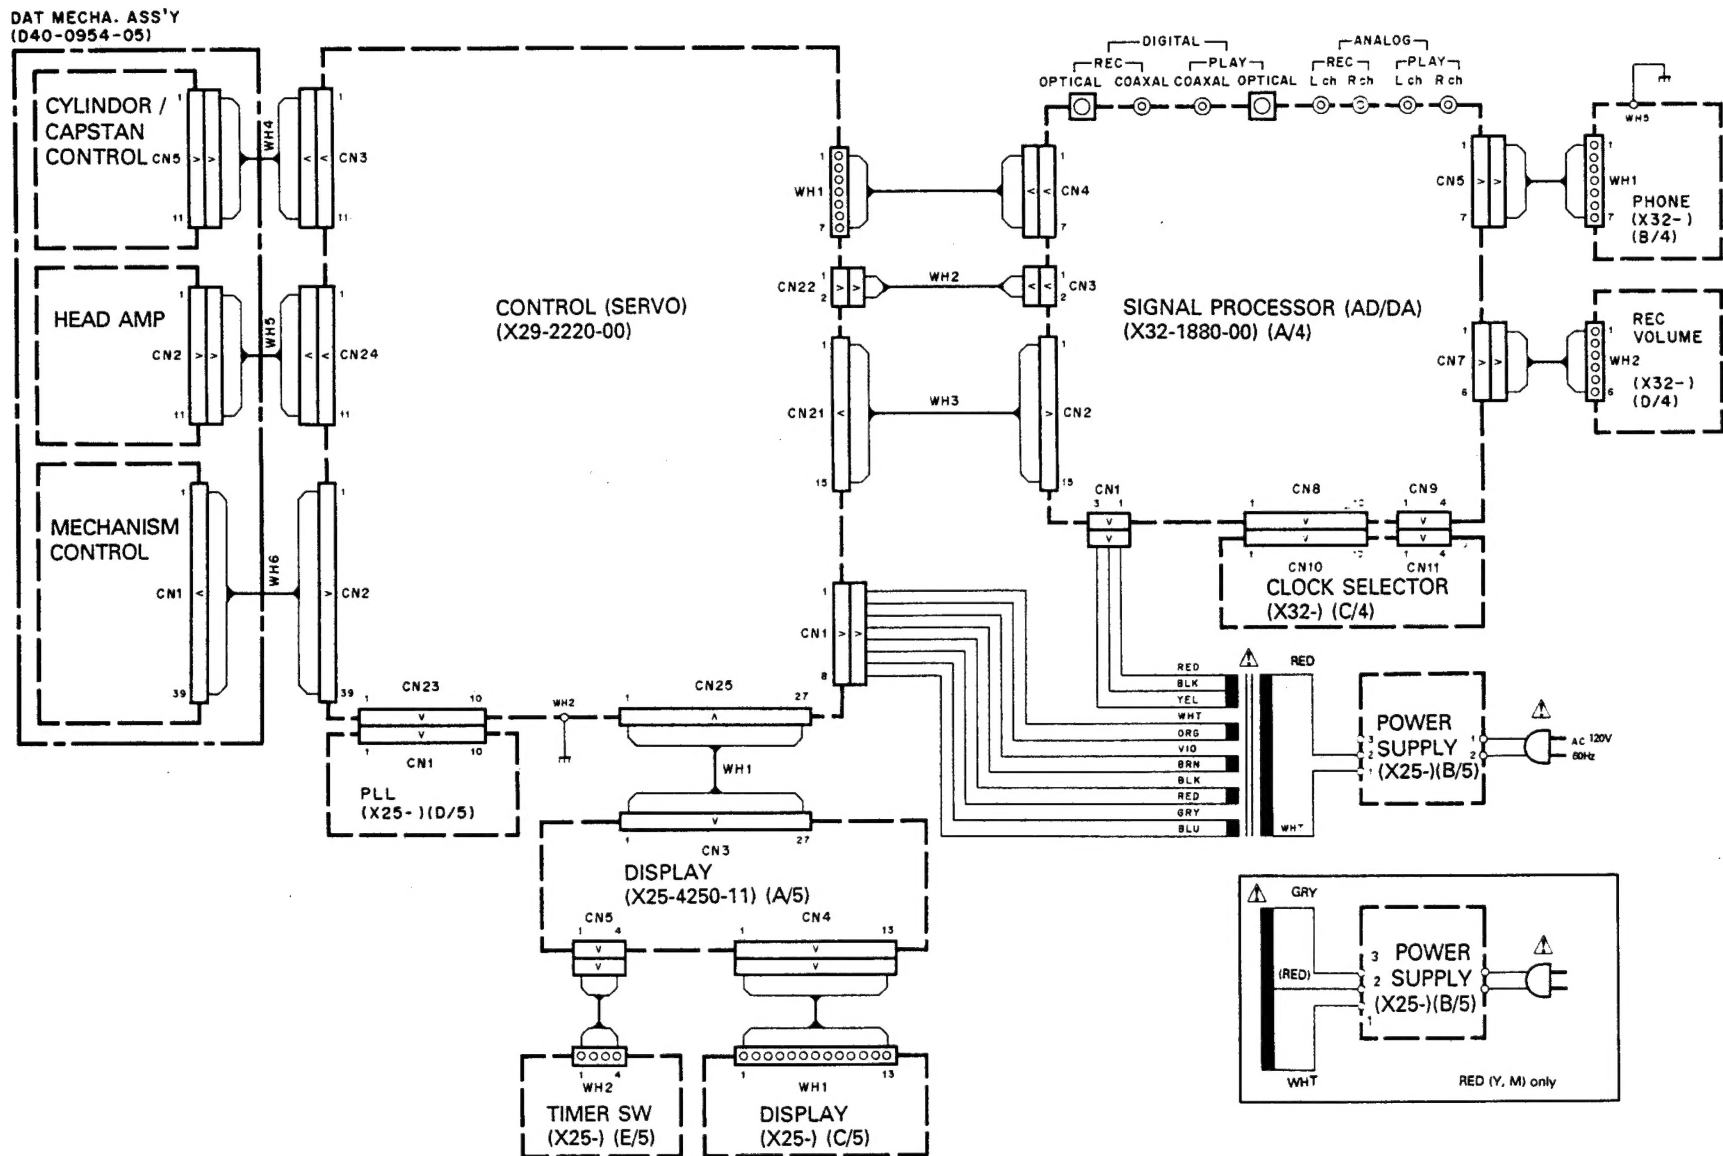

4. After adjustment, press the OPEN/CLOSE button to reload and press the PLAY key again. Confirm the RF envelope waveform is correct.

- DC voltages are as measured with a high impedance voltmeter. Values may vary slightly due to variations between individual instruments or/and units.

CAUTION : For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list). Δ Indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

DX-7030

PARTS LIST

DX-7030

SPECIFICATIONS

[Mechanism / transport system]

Type

.....Digital audio tape deck with rotating head system

Heads

.....Two rotating heads (sputtered sendust heads)

Motors (6 motors) DD motor (for capstan)

DD motor (for drum)

DC motor (for loading) x 4

Tape speed 8.15 mm/s

Recording time 120 minutes (with DR-120 tape)

Rewind time

..... approx. 40 sec (with 120 minute recorded tape)

[Digital format]

No. of channels 2 channel stereo

Sampling frequency

.....Recording : 48kHz, 32kHz (digital input only)

Playback : 48kHz, 44.1kHz, 32kHz

No. of quantization bits 16bit linear

[Electrical characteristics]

Frequency response 2Hz ~ 22kHz

Signal to noise ratio More than 93dB

Dynamic range More than 92dB

Total harmonic distortion Less than 0.005%

Wow flutter Below measurable limit

[Input terminals]

Line input (analog signal recording)

..... 500mV, input impedance 10k Ω

Digital coaxial input

..... 0.2V (P-P), input impedance 75 Ω

Digital optical output ... -15dBm ~ -24dBm (660nm)

[Output terminals]

Line output (analog signal playback)

..... 2V RMS, output impedance 1k Ω

Digital optical output

..... -18dBm (wavelength 660nm) rectangular type

Headphone output

..... 20mW (16 Ω), stereo standard jack

[General]

Power consumption 30W

External dimensions W : 440mm

H : 127mm

D : 370mm

Weight (net) 9.6kg

Note:

KENWOOD follows a policy of continuous advancements in development. For this reason specifications may be changed without notice.

Note :

Component and circuitry are subject to modification to insure best operation under differing local conditions. This manual is based on, the U.S.A. (K) standard, and provides information on regional circuit modification through use of alternate schematic diagrams, and information on regional component variations through use of parts list.
